

Customer Churn Risk Assessment — Executive Summary

Subscription Business | Revenue Risk & Retention Intelligence

Business Context

Customer churn represents a direct and preventable loss of revenue. This assessment identifies which customers are most likely to churn, how much revenue is at risk, and where intervention will have the highest impact.

Key Metrics

Total Customers: 801
High-Risk Customers: 213 (27%)
Average Churn Probability: 0.34
Average Revenue per Customer: 47.48

Risk Insights

Over 1 in 4 customers fall into high-risk categories. High-value customers are present within this segment, increasing revenue exposure. Churn risk is not evenly distributed, creating an opportunity for targeted intervention.

Channel-Level Findings

Paid Ads & Organic Search: Highest concentration of high-risk customers, indicating acquisition or onboarding gaps.
Email Campaigns: Lower volume but consistent churn patterns, suggesting engagement inefficiencies.

Key Drivers of Churn

Low customer engagement
Irregular or failed payment behavior
Short customer lifetime before inactivity
Acquisition channel quality differences

Recommended Actions

1. Prioritize high-risk customers (probability > 0.7)
2. Reduce payment friction with reminders and retries
3. Improve acquisition quality for Paid Ads
4. Deploy early engagement strategies

Expected Outcome

Reduced preventable churn
Protection of high-value revenue segments
Improved customer lifetime value (CLV)
More efficient acquisition and retention spend
